

The Milford Township Board of Supervisors requests a review of the current design of the 663/Allentown Road intersection to consider changes that have occurred.

Specifically, the owner of the southeast corner removed a barn for salvage. That barn obstructed the ability to include a north-bound turning lane on Allentown Road. Milford Township has subsequently purchased that property and would cooperate in providing right-of-way needed.

In addition, the SR 0663 Traffic Study for Future Widening and Improvements that was prepared this year by AECOM identified the need to, “install northbound left turn lane of 150 ft”. This study also identified the need to provide additional eastbound and westbound through lanes.

Recent flooding of August 11th has damaged the 663 bridge requiring concrete barriers to be placed longitudinally along the southern side of the travel lane. These changes of conditions warrant a reevaluation of the situation.

We respectfully request that the design be reviewed to address current needs and conditions.
